PREMIX

AMBAR PREMIX is a mixture of vitamins, minerals and feed additives designed to satisfy the entire dietary needs of farm animals and improve the professional results of livestock farming, including broilers, turkeys, breeders, layers, lamb, dairy cows, calves, sheep, fish and more.

Based in Israel, which is considered a world leader in animal husbandry, Ambar Feed Mills owns and operates an advanced premix factory, inclusive of a professional staff, in-house laboratory and in line with ISO standard. Our products include only carefully selected ingredients from high-quality European brands.

The knowledge Ambar gained in the production of premixes and feed has contributed greatly to Israel's leading position in the animal husbandry industry.

Among Ambar's Premix customers are feed mills, dairy farms and other animal feed manufacturers.

ADVANTAGES OF AMBAR PREMIX

- It includes all the vitamins, minerals and feed additives, such as amino acids, enzymes, growth promoters, drugs and more
- Ambar uses raw materials only from leading European suppliers, without compromising on quality
- Nutritional additives are tested in chicken coops and cowsheds before going into regular production
- Production of concentrates containing protein sources and amino acids is optional
- Adding medication to Ambar's Premix is optional
- We offer off-the-shelf premixes as well as customer tailor-made solutions. Our customers can take advantage of our accumulated extensive professional knowledge
- Ambar also owns and operates animal farms, and we can therefore closely relate to the farmers' needs, as well as advise our customers on nutritional and professional issues
- Advanced quality assurance system and in-house laboratory (optional lab analysis)

BENEFITS OF USING AMBAR PREMIX PER LIVESTOCK INDUSTRY

Broilers and turkeys - improved feed efficiency, growth rate, live weight, health, livability and animal welfare.

Layers - improved laying rate, egg size, eggshell quality, fertility rate, chick quality, yolk color.

Cattle and sheep - improved milk and meat yields, rapid growth rate, feed efficiency, fertility, hoof strength, vitality and overall health.

Fish - improving growth rate and results, livability, color, health.

AMBAR FEED MILLS

As the largest manufacturer and supplier of animal feed in Israel, Ambar Group is committed to the highest standards in product quality and customer service. Ambar's ability to repeatedly meet the highest standards of excellence has made it the leader it is today.

All of Ambar's employees are committed to upholding the Group's reputation as a reliable, professional and efficient manufacturer that promotes continued customer growth, which enables the company's continued success.

ABOUT AMBAR

Established in the 1960's by farmers, Ambar is the largest and most technologically advanced feed institute in Israel. Ambar operates on the basis of the most advanced and uncompromising quality standards in the world. It is a leader in innovation, having introduced new technologies and computerization into all of its work processes.

Ambar produces nearly 1 million tons of animal feed annually, for a variety of livestock. Along with its routine production lines, the factory also supplies individual orders for its customers as needed, at any given time.

The factory's production lines operate under strict biological safety requirements. Its state-of-the-art equipment allows flexibility and offers a variety of solutions, simultaneously, to several clients and is fully supported by Ambar's laboratory and the factory's technical team.

To ensure high quality of its final product, Ambar produces the premix and vitamins from the best and most reliable sources. It imports raw materials independently from exceptional growers and producers around the world.

Ambar also markets a wide variety of raw materials, grain and food additives which are used in livestock feeds.

AMBAR PRODUCTS

- **Animal feed** – broilers, turkeys, breeders, turkey breeders, layers, dairy cows, calves, sheep, fish and more
- **Premix** (vitamin and mineral concentrates)
- **Concentrates** – protein concentrates, dairy concentrates and blends as a basis for production of feedstock
- **Food additives**
- **Raw materials and grains**

ADDITIONAL ACTIVITIES

- **Ambar Food Centers** produce and deliver ready TMR to dairy farms all over Israel.
- **Alef Bar** is Ambar's breeding branch where it yields about 30,000 tons of meat a year.

Ambar also owns 50% in:

- **Ramit and Efrat** – representing ROSS and BUT in Israel, grows broiler and turkey chicks in several sites across the country.
- **Cornish Hen** – operates three slaughterhouses for poultry and turkeys.
